Water leakage detection sensor cable

Color-changing Water Leakage Sensor

AD-HS
<<Important safety instructions>>>

⚠️ Warning

Improper handling of the sensor in non-compliance to any of the following warning precautions or instructions given on a WARNING label can result in death, serious injury, fire, electric shock, and/or sensor failure.

⚠️ Warning Precautions

⚠️ Strictly Prohibited!

- Never use the sensor as electric cable.

⚠️ Confirm!

- The sensor length must not exceed 100 m per circuit.
- Handle the sensor carefully; it will not work if soiled or damaged.
- Take precautions to ensure the sensor does not become wet.
- Before use, be sure to read the precautions on the rear of the sensor case.

⚠️ Caution on Installation!

- Do not install the sensor directly on any surface where dew can form.
- Attach the sensor as tightly as possible to the mounting surface. Any unavoidable gap such as on an uneven floor or the like horizontal surface must not exceed 2 mm, and on a pillar, beam or the like vertical surface the gap must not exceed 1 mm.
- To minimize the influence of external electromagnetic induction, the sensor comprises two electrodes twisted in a braid form. However, avoid installing the sensor over a long distance in parallel with a power cable or other electromagnetic induction sources.
- Where the sensor intersects a power cable of 300 V or higher service voltage, surround the sensor completely with an insulating protective barrier, such as plastic molding.
- Install the sensor so that it can be easily replaced. After detection of water leakage, the sensor is reset when the water has evaporated. However, if the sensor absorbs water that contains conductive or water-repellent material, it possibly cannot be reset and needs to be replaced.
- To prevent electrical corrosion of the sensor, be sure to connect it to an alternate-current water leakage detector.
- Do not allow wax or other oil-based material on the sensor; water is repelled from the surface and may not be detected.

Table of contents

1. Scope .......................................................................................................................... 1

2. Construction ................................................................................................................ 1

3. Specifications .............................................................................................................. 2
1. Scope of application

The specification document is applicable for the color-changing type water leakage sensor (AD-HS sensor). This sensor can rapidly detect water leakage, and becomes red when absorbing water.

2. Construction

Fig. 1 and Fig. 2 show the construction of the AD-HS sensor

- Electrode: 0.33 mm² tinned annealed copper wire
- Color changing: Polyester fibre filled with dye
- Inner sheathing: Polyethylene
- Outer sheathing: Polyester

3. Specifications

The specifications of AD-HS sensor are shown in Table 1.

<table>
<thead>
<tr>
<th>Item</th>
<th>Specification</th>
</tr>
</thead>
</table>
| **Construction**              | Material: Tinned annealed copper stranded wire  
Composition: Copper wire 0.18mm in diameter × 13 (0.33 mm²)                                                                                     |
| **Detection characteristic** | When the amount of water (tap water) is 3.0ml or below, the electric resistance between electrodes is 5kΩ (AC) or below.  
- Water dropping amount: directly drop to the sensor (0.05ml/s)  
- Measuring ambient temperature: 24°C, humidity: 60%RH  
- Conductivity water temperature: 24°C, 200μS/cm [5.0kΩ·cm]  
- Testing equipment: Water leakage detector AD-AS-10DRM manufactured by our company.  
□ The resistance between electrodes and the amount of water during the sensor operation are dependent on the laying status, environment and water quality of the sensor. |
| **Resetting characteristic** | After the water leakage detection, the sensor is reset by natural drying or moisture removal.  
However, if there are conductive or water-repellent substances in the leaking water, the sensor cannot be reused. |
| **Resistance between electrodes (AC)** | 10 MΩ min. /100m (measuring ambient temperature: 24°C, humidity: 60%RH)                                                                 |
| **Humidity resistance**       | In the high humidity condition, the resistance between electrodes is 100kΩ or above /100m (measuring ambient temperature: 60°C, humidity: 95%RH) provided that there is no moisture condensation.  
100 MΩ min. /100m (measuring ambient temperature: 60°C, humidity: 95%RH)                                                                 |
| **Heat resistance**           | 60°C max. for continuous operation (heat-resistant temperature: 80°C)                                                                            |
| **Weight**                    | 11.6±1.5 g/m                                                                                                                                 |
